Status Report

Achievements
- Completed a preliminary automatic migration of the application. Some preliminary statistics include: - Number of EWI (Error, Warning, and Information) Messages: 7,231   - Compilation Errors (Mig. Code): 21,948   - It is also necessary to remove the circular dependency between the Security and SecurityMgt Interface projects, or else Visual Studio 2005 will not be able to open the Supervisor Project.   - Got the list of ASP pages used by the application to communicate with the Omiga components: - LaunchBatch.asp   - DeleteCustomerLock.asp   - UnlockApplicationAndCustomers.asp   - LockCustomersForApplication.asp   - GetBankDetails.asp   - ValidateUserLogon.asp   - Migrated a small application to validate the Test Partner test cases. The test scripts look for VB6 components in the forms, and thus it does not work with the migrated application. Vertex will contact Compuware to see if there is a way to work around this limitation. Another alternative is to create manual test cases.   - The proposal will consider doing the migration of the ADO database components using either the SQL Client provider or the proposed ADO.NET Common libraries.

Open Issues
- Migrate the code using the latest build of the VBUC   - Make a decision on the testing strategy for the application.
